

Environmental Policy

Complete AMS is committed to continuous improvement of the Environmental Management System to effectively monitor the use of natural resources, both renewable and non-renewable across our operations, and maximise the efficiency and effectiveness with which they are used, with a clear view of minimising environmental impacts.

All documentation and processes are underpinned by **ISO 14001 Environmental Management Systems**, as well as compliance to relevant local government, state, and federal statutory, legislative, and regulatory requirements.

A culture of environmental awareness and management at **Complete AMS** is achieved by:

- Awareness of the **Complete AMS** Environmental Management System by all employees during the induction process and via this Policy
- The provision of appropriate equipment to handle any environmental emergency that could occur on **Complete AMS** premises
- Proactive management of chemical and hazardous substances to eliminate the potential of pollution within areas of control by **Complete AMS**
- Review and monitoring of the Environmental Management System, actions and outcomes by Executive Management to ensure compliance
- Communicating environmental information to relevant interested parties via the Green Office Management Plan, and clauses in supply conditions and contracts outlining the requirements of compliance
- Ongoing compliance with local government authorities to ensure that we meet requirements for the prevention of pollution and effective waste management.
- The provision of adequate resources enables proactive planning and implementation of activities designed to eliminate the incidence of pollution

Kane Watkins
Chief Executive Officer
